8th International Congress «Management of Disaster Victims»

October 9th- October 13th 2018

8th international conference "MANIENT OF DISASTER
VICTIMAL TIME (1997)

Dear Colleagues,

The Athens University, School of Medicine, Post-graduate program "International Medicine- Health Crisis Management" and the Athens University, School of Geology, Post- graduate program "Strategic Environmental Disaster and Crisis Management" in collaboration with the Emergency Medicine Department, University of Bern, Switzerland, welcome you to the "8th International Congress in the Management of Disaster Victims" in the island of Rhodes, Greece.

The scope is to train our post graduate students but also officials from civil protection agencies, medical and nursing staff and humanitarian organizations representatives while dealing with both manmade and natural disasters so as to acquire the necessary know- how for the effective and efficient management of Major Mass Casualty Incidents. Our vision is to advance learners critical thinking and problem solving attitude via a series of simulation exercises in real life settings.

Participants will follow keynote lectures on the most sensitive issues of major disasters and mass casualty crises resulting from earthquakes, tidal waves, transport accidents (road, aviation and maritime), fires in urban complexes etc.

This Advanced Course offers a comprehensive and up-to date knowledge to the participants giving them the opportunity to acquire skills and experiences to plan for and respond efficiently in major events both in pre-hospital as well as in hospital settings. Moreover, the participants will receive training in modern search-and-rescue procedures, emergency care of victims and response during the "golden-hour". Training on emergency planning, evacuation procedures and vulnerability assessment using state of the art technologies is also foreseen.

This program is designed to help health professionals, managers and the local communities improve their capacity to cope with Major Mass Casualty Incidents.

For the 8th Advanced Course we have chosen once again the island of Rhodes. Rhodes, due to its geopolitical position, its particular interest as a touristic destination for more than one million tourists per year and its infrastructures seems to guarantee the ideal conditions of hosting this initiative in a permanent base.

This year we have the pleasure and the honor to see our network of collaboration extended. We therefore would like to welcome the Hellenic Surgical Society, the World Society of Emergency Surgery and the Ambroise Paré International Military Surgery Forum (APIMSF).

We strongly believe that a high level seminar on health intervention in major incidences in this area would empower the resilience and mitigation level not only of the local population but also of the visitors. We take this opportunity to address thankful considerations to all the authorities in Rhodes involved mainly the Regional Division of South Aegean and the Municipality of Rhodes.
